# SIMPLIFY AND CUSTOMIZE YOUR OPERATION WITH THE PAC CENTRAL OIL MIST SYSTEM

**Your maintenance personnel need a convenient, efficient, fool-proof way to distribute oil at each infeed.**

**S**top monitoring lubricant levels at various locations around the plant. Have it in one easy to access location with one supply tank to maintain. The potential for costly clogs in your ducting is eliminated by taking control away from operators and automatically shutting down the trim system if the alarm is not cleared in the time allotted. Oil distribution at each infeed can be customized according to the material and press speed. When you upgrade to the Central Oil Mist System you will recognize labor savings, prevent system downtime and retain control of your oil usage.

- Eliminates the labor required to fill containers at each machine
- Flow monitoring capabilities for each distribution point
- Automatic transfer from the oil supply container to the reservoir tank
- Low flow and oil level alarms
- Location of the oil supply removed from the production environment for easy access and monitoring
