

New Standard on Explosion Protection Announced by NFPA

The National Fire Protection Association (NFPA) re-issued NFPA 68 Standard on Explosion Protection by Deflagration Venting. This revised standard focuses on combustible dusts.

The main points under NFPA 68 now require you to do the following:

- Determine if your dust is explosive - anything over 0 Kst is required to have explosion venting
- Follow mandatory requirements for collecting explosive dusts
- Conduct a risk assessment of your dust collection system
- Document your test and maintenance reports and owner's manuals
- Schedule annual inspections

[Contact PAC today](#) to discuss how our dust collection system can improve safety and reduce risk to your facility and employees.

If you currently have a PAC dust collection system and want to ensure you meet the new safety requirements, please contact us at 302.999.8000.
